

CORE supports a wide range of users including those who need:

Programmable access to metadata and full text content to build new applications

Transaction access to the information in individual research papers

Analytical information about large quantities of research papers, such as repository administrators or funders

Use CORE:

AS A USER, to search, discover and download millions of Open Access research papers

AS A PROGRAMMER, to build new services and text mine millions of research papers

AS A LIBRARIAN, to point library users to millions of open access research papers

AS A REPOSITORY MANAGER, to give you control over the aggregated content and provide analytics for your institution

AS A DATA PROVIDER, to increase the visibility of your content and contribute to the wider Open Access mission

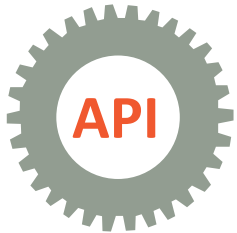

Aggregating the world's open access research papers

CORE provides free access to millions of research articles aggregated from thousands of Open Access repositories and journals. CORE facilitates access to research papers for all, offering a set of applications supporting researchers, the general public, software developers, libraries and others.

CORE harvests, maintains, enriches and makes available metadata and full text content from a global network of Open Access repositories and journals. Use this list to choose the best **CORE** service for your needs.

CORE API provides an access point for those who want to develop applications making use of our large collection of Open Access content.

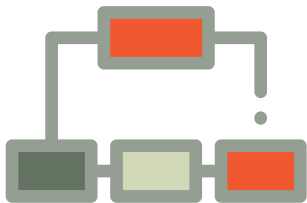

CORE Dataset enables you to download all the aggregated content from Open Access journals and repositories. Use the dataset for analysis and application of computationally intensive processes.

CORE Search enables users to search and access research papers via a faceted search interface.

CORE Repository Dashboard is a tool designed specifically for repository managers or research outputs administrators. The aim of the Repository Dashboard is to provide control over the aggregated content and help in the management and validation of the repository collections and services.

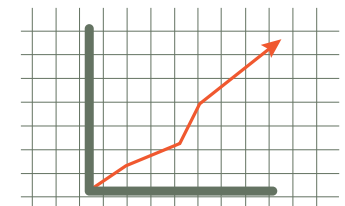

CORE Publisher Connector is a software providing seamless access to Gold and Hybrid Gold Open Access articles aggregated from non-standard systems of major publishers. Data is exposed using the ResourceSync protocol.

CORE SDKs provide seamless access to our content for programmers. The CORE R SDK is freely available and it is mainly community-led. The aim is to maximise productivity for data analysis, prototyping and effortless integration.

CORE Recommender is a plugin that can be installed in repositories and journal systems to suggest similar articles. Its purpose is to support users in finding articles relevant to what they read.

CORE Analytics Dashboard helps institutions to understand and monitor the impact of their research.
